User prompt: How do I create a purchase requisition?

Response: Here is the guidance for creating a purchase requisition (PR) in the P2P cycle:

- **Purpose:** An internal request initiated by a department or employee needing goods, materials, or services.
- **Steps:**
    1. Log into the ERP employee self-service portal.
    2. Navigate to the procurement or requisition module and select create new purchase requisition.
    3. Enter the key inputs: item details, quantity, estimated cost, required date, and account assignment/cost center.
    4. Submit the requisition, which automatically routes through approval workflows based on organization hierarchy and budget thresholds.
- **Common Issues:**
    - *Workflow stuck or delayed:* Usually caused by an incorrect cost center assignment or budget holder being out of office. Verify your cost center and check the workflow routing history.
    - *Budget exceeded errors:* Occurs when the estimated cost crosses available departmental limits. You will need budget owner intervention or a budget transfer.

Note: This step is normally performed by the **Requester** (employee or department member needing the goods/services).

Does this resolve your question, or do you need further assistance with another part of the process?

User prompt: How do I fix blocked item?

Response: I can only guide you through this. I can't perform this action myself. Please use the ERP system directly, or contact your ERP support team if you're blocked.

Purpose

To resolve and unblock an item (such as a blocked invoice, purchase order, or requisition) so that the procurement or accounts payable workflow can proceed.

Steps

1. **Identify the block reason:** Navigate to the transaction or document view in the ERP system to check the error message or hold status (e.g., 3-way match failure, budget exceeded, or missing approval).
2. **Review document discrepancies:** Compare the Purchase Order (PO), Goods Receipt (GRN), and Vendor Invoice details to identify pricing, quantity, or tax discrepancies.
3. **Correct data or request intervention:** Update the erroneous fields if you have permissions, or route the exception to the designated buyer, budget holder, or AP team member to release the hold.

Common Issues

- **Invoice placed on hold due to 3-way match failure:** Occurs when there is a mismatch between the PO price/quantity and the vendor invoice or goods receipt. *Resolution:* Adjust the invoice or goods

receipt quantities/prices to match tolerances, or obtain approval for the variance.
- **Workflow stuck on budget check:** Happens when departmental limits are exceeded. *Resolution:* Escalate to the budget owner for approval or request a budget transfer.

Does this resolve your question, or do you need further assistance with another part of the process?

User prompt: can you just create a purchase order for me right now?

Response: I can only guide you through this. I can't perform this action myself. Please use the ERP system directly, or contact your ERP support team if you're blocked.

Purpose

To issue a legally binding contract to a vendor specifying items, quantities, pricing, payment terms, and delivery schedules.

Steps

1. Navigate to the procurement or purchasing module in your ERP system and locate the approved Purchase Requisition (PR) or Request for Quotation (RFQ).
2. Initiate the creation of a new Purchase Order (PO) by auto-populating or entering the approved line items, quantities, and vendor master details.
3. Review and input necessary financial attributes such as tax codes, payment terms (e.g., Net 30), and shipping schedules.
4. Submit the PO through final internal approval workflows, which automatically transmits the document electronically (via EDI, email, or vendor portal) to the vendor upon approval.

Common Issues

- **PO blocked on workflow or budget approval:** Occurs when spending limits are exceeded or the designated approver is unavailable. *Resolution:* Route the PO to the appropriate departmental budget owner or substitute approver to release the workflow block.
- **Vendor master errors:** Happens if the supplier is inactive, blocked, or missing mandatory tax/banking details. *Resolution:* Contact your master data management or procurement operations team to update the vendor master record.

Note: This step is normally performed by a **Procurement Officer** or **Buyer**.

Does this resolve your question, or do you need further assistance with another part of the process?

User prompt: How do I setup a new approval workflow for purchase order

Response: I can only guide you through this. I can't perform this action myself. Please use the ERP system directly, or contact your ERP support team if you're blocked.

Purpose

To configure automated approval routing and thresholds for purchase orders based on organizational hierarchy, cost centers, and spending limits.

Steps

1. Navigate to the workflow configuration or Business Process Management (BPM) module in your ERP system setup.
2. Select the Purchase Order approval workflow template and define the routing rules (e.g., routing based on total amount, cost center, or item category).
3. Assign designated approvers, approval limits, and multi-level escalation hierarchies in alignment with your corporate policy.
4. Test and activate the approval workflow rules so that newly generated POs automatically route to the correct individuals.

Common Issues

- **Workflow failing to trigger or routing incorrectly:** Happens when rule conditions overlap or cost center hierarchies are improperly mapped. *Resolution:* Review the workflow rule matrix and test conditions using an administrative sandbox or escalate to your ERP system administrator.
- **Approver out of office causing bottlenecks:** Occurs when a designated manager is unavailable. *Resolution:* Set up delegation of authority or alternate approvers within the workflow configuration or contact IT support.

Note: This step is normally performed by an **ERP Administrator** or **Procurement System Owner**.
